

ABSTRACT OF THE DISCLOSURE

1 An EMI shielding structure comprises a printed
2 circuit having at least one contact protuberance forming
3 part of a ground plane. An EMI shield member is placed
4 in a desired alignment over the printed circuit. The EMI
5 shield member is formed with an aperture receiving the
6 contact protuberance in contact with the aperture
7 defining contact wall so that electric continuity
8 between the EMI shield member and the ground plane is
9 ensured.
